CAREER OBJECTIVE

I am a passionate B.Tech student specializing in Information Technology. I thrive in creating innovative solutions through technology, with hands-on experience in Android app development and various programming languages. My academic achievements reflect my dedication to excellence.

EDUCATION

B.Tech, Information Technology 2024 - 2027
Vishwakarma Institute of Technology

CGPA: 8.82/10

Diploma, Computer Science & Engineering 2021 - 2024
Government Polytechnic, Murtizapur

Percentage: 88.74%

Secondary (X), Maharashtra State Board Of Secondary And Higher Secondary Education 2021
Aadarsh Convent Chikhali

Percentage: 91.00%

TRAININGS / CERTIFICATIONS

AWS Academy Graduate - Cloud Developing
Jan 2026 - Apr 2026

AWS Academy, Virtual

Coursera IBM Full Stack Software Developers
Jul 2025 - Oct 2025

Coursera, Virtual

Acmegrade Machine Learning Course
Jun 2024 - Jul 2024

Acmegrade/ IIT Bombay, Virtual

PORTFOLIO

GitHub link

PROJECTS

EventPlus
Mar 2026 - May 2026

A real-time event engagement platform where attendees scan QR codes to earn points, unlock badges, and redeem rewards. Built with React PWA, Node.js, PostgreSQL, and Python analytics.

Court-Management-System-using-HPSC-GA
Feb 2026 - May 2026

The HPCS-GA framework provides a scalable, fair, and mathematically optimized solution for real-time judicial scheduling. Future iterations can enhance this pipeline by incorporating Reinforcement Learning to make autonomous scheduling adjustments without predefined optimization functions, expanding the engine to support multi-day/multi-stage dependencies, and integrating Explainable AI (XAI) to provide clear legal justifications for automated scheduling decisions

Purchase Ordering System ↗
Aug 2025 - Oct 2025

Enables RFQ Approval Vendor quote PO generation workflow with multi-vendor assignment, quote comparison, auto PO creation, and PDF downloads. Role-based access for Requester, Approver, Officer, and Vendor.

Inventory-Reblancing- ↗
May 2025 - Jul 2025

The AI-Based Inventory Rebalancing System is designed to help retailers (like Walmart) optimize inventory movement across multiple zones.
It uses predictive analytics by combining historical sales data with external factors such as:

- Google Trends (demand forecasting)
- Weather data (impact on sales)
- Public holidays & events (seasonal demand shifts)

The system generates zone-wise transfer plans to ensure the right products are in the right place at the right time — reducing stockouts, overstocking, and logistics costs.

Gas-Detection-with-IOT with Android App ↗
Jan 2025 - Feb 2025

The IoT-Based Gas Detection System is an end-to-end, real-time environmental monitoring and safety automation platform designed to detect hazardous gas leakages (such as LPG, Methane, or Carbon Monoxide). Built to address critical safety vulnerabilities in residential and industrial spaces, the system bridges physical hardware sensors with a high-throughput digital backend.
The application ingests continuous atmospheric data streams, evaluates toxic thresholds on the fly, and instantly triggers multi-channel safety alerts (push notifications, audible buzzers) while executing automated containment protocols (such as activating exhaust systems) to prevent accidents before they escalate.

GrowBuddy ↗
Jan 2024 - Mar 2024

IoT-based system using Arduino and NodeMCU for real-time plant health tracking Android app (Java & Firebase) for live data visualization and pump control & CNN-based disease detection using TensorFlow and Keras

SKILLS

- C#
- Python
- Android
- Internet of Things (IoT)
- C Programming
- PHP
- SQL
- Firebase
- Java
- Flutter
- GitHub

ADDITIONAL DETAILS

- 3rd Prize- Technothon 2024 (National Level)
- 1st Prize- FEAT 2024 (State Level, Google DSC + IEEE)
- 2nd Prize- Innovision 2024 (State Level)
